Ocean Pollution, it is bad right? Well, how bad is bad? What and how can we stop it? Is there a way to get rid of it forever? Ocean pollution is not good for the environment. We can get rid of it by using dissolvable plastic, for many items we use every day. Dissolvable plastic can be for many reasons, the main one being when people toss it into the ocean, it would just simply dissolve over time. This will help marine life. Another way, the more practical way to get rid of ocean pollution is by just simply not throwing junk and harmful plastics into the ocean. This seems like the simpler way to not create less ocean pollution and thus give marine life more chance of survival. The last way I believe may help the ocean is by not using boats for transporting oil and gas. This can give another solution to the big problem at hand, ocean pollution.

To Begin with, we can get rid of it by using dissolvable plastic, for many items we use every day. Dissolvable plastic can be used for many reasons, the main reason is being when people toss it into the ocean, it would just simply dissolve over time. People use plastic for many things, such as water bottles, straws, cutlery, etc. Can you imagine having a company that distributes dissolvable plastic, it would be amazing! Imagine this: somebody is walking on a bridge with a water bottle or something in their hand, and then it slips and falls into the ocean.... But because it is dissolvable it will not harm the environment! This is how dissolvable plastics can be great for the ocean and to eliminate ocean pollution.

To continue, another way, the more practical way to get rid of ocean pollution is by just simply not throwing junk and harmful plastics into the ocean. Ways to do this can be by Starting fundraisers, showing people how much pollution and junk that has been put out into the ocean, having challenges of who can collect the most trash, or even have trash collecting crews on boats picking up some trash! You can think of millions of ways! This is how people can just simply not throw plastics into the ocean and help clean some up!

To add on, the last way I believe may help the ocean is by not using boats for transporting oil and gas. This can give another solution to the big problem at hand, ocean pollution. A way you can do this is by transporting oils and gases with airplanes! This can be a safer and faster way of transporting oils and gases. Also, you can do it by transporting the oils and gases through car or truck if you are transporting it between countries like from USA to Canada or Usa to Mexico. This is how not using boats for transporting oil and gas can help to stop ocean Pollution.

In conclusion, Ocean Pollution can be dealt with many ways. We can get rid of it by using dissolvable plastic, for many items we use every day. Dissolvable plastic can be for many reasons, the main one being when people toss it into the ocean, it would just simply dissolve over time. This will help marine life. Another way, the more practical way to get rid of ocean pollution is by just simply not throwing junk and harmful plastics into the ocean. This seems like the simpler way to not create less ocean pollution and thus give marine life more chance of survival. The last way I believe may help the ocean is by not using boats for transporting oil and gas. This can give another solution to the big problem at hand, ocean pollution. Do you think you will help the cause of Ocean Polltion?
